How To Determine If Tech Home Security is the Right Fit For You

With technology and internet usage increasing rapidly, it's more important than ever to make sure you're acting safely online and protecting your personal information. If you spend any length of time on the internet or store any personal information on a computer, you should be investing in protection. If any of the following situations apply to you, you should consider Tech Home.

Kids Using Electronic Devices?

As a parent, you want to ensure you're monitoring just how your child is using the internet. Tech Home gives you the ability to control and protect your children without checking their devices manually. You have the ability to block websites, monitor their social media and browser history, and control how much they can use the device.

You Keep Your Passwords In a Word Document on Your Desktop…

If you're regularly logging on to the internet, chances are good you have several, if not more, passwords. Sometimes with all the different requirements that websites have to create a personal password, it can be difficult to keep them all straight. We all know the frustration of typing in several incorrect passwords and not being able to access what you need right away. Tech Home is equipped with a Password Keeper. It will store all your usernames and passwords for your convenience. It also features strong encryption software to keep your information safe.

Someone Stole Your Phone?

If you've ever experienced the sheer terror of either losing your phone or having it stolen, you know how difficult it is to quickly and easily lock it down so no one can access your personal information. With Tech Home's anti-theft for mobile devices you'll be able to lock your device remotely to ensure no one can access your personal information. You're also able to track your mobile device if it was stolen to see where it is. Anti-theft for your mobile device is something you'll never regret having because by the time your phone is lost or stolen, it's too late to add it on.

Do You Capture Life's Moment on Camera?

If you find that you like to capture a lot of life's moments on camera, you'll benefit from Tech Home's Cloud File Backup. Cloud based service has high reliability compared to a hard drive back up because it's safe against weather related issues or any other physical damage. Since this is an automated backup, you don't have to manually back up your files which can sometimes be time consuming. Not only does it automatically back up your files, but they are also accessible anywhere.

If you're like us, you'd be devastated if your favorite memories or most important files got destroyed by accident. Get that extra layer of security with Tech Home.

How To Determine If Tech Home Security is the Right Fit For You

If You Use an Electronic Device, These Are the Bare Minimum Necessities

The effects of having your personal information being the wrong hands can be disastrous. Tech Home comes with anti-virus, anti-phishing and firewall protection.

Tech Home's anti-virus protects against five different threats: worms, bots, Trojans, false positives and malware. It will automatically remove viruses for no extra charge and it automatically updates to ensure you're always getting the most up-to-date protection.
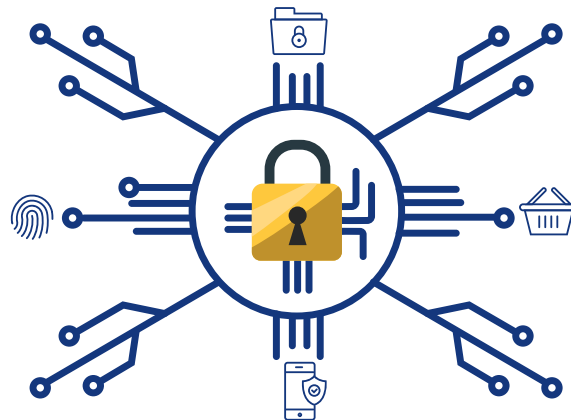

The anti-phishing helps keep your important information like passwords, credit card numbers or social security number locked up and safe from people who might be trying to steal them. It monitors any suspicious sites, emails and links you encounter.

Firewall protection is an extra layer of security on top of your Anti-Virus. Without firewall protection, your network is vulnerable to hackers and viruses. The firewall also drastically decreases the load put on your anti-virus experiences.

Tech Home has the triple threat when it comes to protecting your network and your personal information. These three features are the bare minimum that everyone should be using to protect their information.

Thinking you need to have access to all of these features? The best part of Tech Home is that these are all included in one package. Your personal information deserves the highest amount of protection. You stand to lose a lot if you risk putting your information out into the world and not securing it against hackers and thieves.
